

TABLE OF CONTENTS

CHAPTER	Page
1 INTRODUCTION	1
Motivation	1
Research Objectives	3
Scope and Limitation of the Thesis	3
Anticipated Outcomes of the Thesis	4
Thesis structure	4
Anticipated Outcomes of the Thesis	4
2 THEORY AND LITERATURE REVIEWS	6
Thermoelectrics	6
Seebeck Effect	6
Peltier Effect	7
Thomson Effect	7
The Kelvin Relationships	7
Figure of Merit	8
Thermoelectric Materials	11
DV-X α	12
Adiabatic approximation	12
Molecular orbital method	12
Hartree approximation	14
Hartree–Fock approximation	15
Hartree–Fock–Slater approximation	17
The LCAO MO approximation	18

TABLE OF CONTENTS (continued)

CHAPTER	Page
Fermi–Dirac distribution function	19
Charge and heat transport properties	22
Seebeck coefficient	28
Electrons thermal conductivity	33
Wiedemann–Franz law	35
Electrical conductivity	37
Molecular dynamics	38
Molecular dynamics method	38
Pair potentials	39
Green–Kubo relation	41
Carbon nanotubes	44
Physical structure of carbon nanotubes	46
Electronic structure of carbon nanotubes	48
Thermoelectric power of carbon nanotubes	50
Literature reviews	52
3 METHODOLOGY	66
Cluster atom models	67
DV–X α calculation	68
MD calculation	70

TABLE OF CONTENTS (continued)

CHAPTER	Page
4 RESULTS AND DISCUSSION	72
Electronics structure	72
Electronics structure of CaMnO_3	72
Electronics structure of CNTs-added CaMnO_3	77
Electronics structure of C-substitute CaMnO_3	81
Thermal properties	85
Cluster atoms model	85
Lattice parameter	86
Compressibility	87
Linear thermal expansion coefficient	88
Heat capacity	88
Auto-correlation function	90
Thermoelectric properties	91
Thermoelectric properties of CaMnO_3	91
Thermoelectric properties of CNTs-added CaMnO_3	94
Thermoelectric properties of C-substitute CaMnO_3	95
Dimensionless figure of merit	99
5 CONCLUSION	100
Electronics structure	100
Thermal properties	101
Thermoelectric properties	102
Suggestion	103

LIST OF FIGURES

Figure	Page
1 Schematic basic thermocouple	6
2 Thermoelectric generator (left); Thermoelectric refrigerator (right)	8
3 Generating efficiency as a function of temperature and thermocouple material figure-of-merit	10
4 Schematic dependence of electrical conductivity, Seebeck coefficient, power factor, and thermal conductivity on concentration of free carriers	11
5 Single walled nanotubes arranged in bundles (SWNT)	45
6 Multi-walled nanotube (MWNT) tube wall	46
7 Graphene sheet showing the sixfold-symmetry (left) and chiral vector	47
8 The three types of CNTs viz. armchair chiral and zig-zag	47
9 2D graphene showing six points denoted by K at the edge of the BZ (left) π - and π^* -band from a tight-binding calculation of CNTs (right)	48
10 Periodic table of carbon nanotubes (Aliofkhazraei, 2015)	49
11 Seebeck coefficient versus temperature (right) and density of state of a (10,10) CNTs with 1% nitrogen impurity (right)	51
12 The $R_{0.25}Ca_{0.75}MnO_3$ cluster atoms	55
13 Energy band structure for the $R_{0.25}Ca_{0.75}MnO_3$ systems (R = La, Nd, Eu, Tb, Ho, Y)	55
14 Energy band structure of $CaMnO_3$ calculated by DFT	56

LIST OF FIGURES (Continued)

Figure	Page
15 Energy band structure of (a) $\text{Ca}_{0.875}\text{Na}_{0.125}\text{MnO}_3$ and (b) $\text{Ca}_{0.875}\text{Ga}_{0.125}\text{MnO}_3$	56
16 (a) Energy band structure and (b) partial density of state of $\text{Ca}_{0.875}\text{Sr}_{0.125}\text{MnO}_3$	57
17 Calculated of (a) electrical conductivity and (b) Seebeck coefficient for CaMnO_3 versus temperature	58
18 Thermal conductivity of CNTs-added CaMnO_3 versus temperature	58
19 (a) Electrical resistivity and (b) Seebeck coefficient of $\text{Ca}_{0.8}\text{M}_{0.2}\text{MnO}_3$ (M=Cu, Ag and Bi) versus temperature	59
20 Thermal conductivity of $\text{Ca}_{0.8}\text{M}_{0.2}\text{MnO}_3$ (M=Cu, Ag and Bi) versus temperature	60
21 Energy band structure C-AFM of (a) CaMnO_3 and (b) $\text{Ca}_{0.75}\text{R}_{0.25}\text{MnO}_3$ (R = La, Ce, Pr, Nd, Pm, Sm, Gd, Tb, Dy, Ho, Er, Tm, Lu)	62
22 (a) Seebeck coefficient and (b) electrical conductivity of $\text{Ca}_{0.75}\text{R}_{0.25}\text{MnO}_3$ (R = La, Ce, Pr, Nd, Pm, Sm, Gd, Tb, Dy, Ho, Er, Tm, Lu) versus Temperature	62
23 History of ZT for CaMnO_3 thermoelectric material	63
24 The ab initio simulated structure of (a) TiO_2 and (b) carbon doped TiO_2 , The Mulliken charge dispersion of (c) TiO_2 and (d) carbon doped TiO_2	64

LIST OF FIGURES (Continued)

Figure	Page
25 (a) The energy band structure of TiO_2 and carbon doped TiO_2 and (b) UV–vis spectra of TiO_2 and carbon doped TiO_2	64
26 Dimensionless figure of merit of TiO_2 and carbon doped TiO_2	64
27 (a) Thermal conductivity and (b) Seebeck coefficient for xCNTdCCO samples versus temperature	65
28 Electrical resistivity for xCNTdCCO samples versus temperature	65
29 Methodology of Applied molecule method	67
30 Cluster atoms model of CaMnO_3 showing (a) cubic structure and (b) orthorhombic structure which viewed in (c) 0 0 1 direction and (d) 0 1 0 direction	72
31 Bond length of CMO (a) cubic structure and (b) orthorhombic structure	73
32 Density of state (DOS) of CMO (a) cubic structure and (b) orthorhombic structure	74
33 Energy level of CMO cubic structure	75
34 Energy level of CMO orthorhombic structure	76
35 Fermi Energy of CMO cubic and orthorhombic structure various temperature	77
36 CNTs–added CMO cluster atoms model, color coded as Ca(green), Mn(purple), O(red), and C(brown)	77
37 Bond length of CNTs–added CMO cluster atoms model	78
38 Density of state (DOS) of CNTs–added CMO cluster atoms model	79

LIST OF FIGURES (Continued)

Figure	Page
39 Energy level of CNTs-added CMO cluster atoms model	80
40 Fermi energy of CNTs-added CMO cluster atoms model various temperature	80
41 C-substitute CMO cluster atoms model (a) #1, (b) #2, (c) #3 and (d) #4 view 0 0 1 direction	81
42 Bond length of C-substitute CMO cluster atoms model	82
43 Density of state (DOS) of C-substitute CaMnO_3 cluster atoms model	83
44 Energy level of C-substitute CMO cluster atoms model	84
45 Fermi energy of C-substitute CMO cluster atoms model various temperature	85
46 Cluster atom model of CMO cubic structure (left) and CMO orthorhombic structure (right) for MD calculation	86
47 Cluster atom model of CNTs-added CMO for MD calculation	86
48 Lattice parameters of C-substitute CMO and CNTs-added CMO at various temperatures	87
49 Compressibility of C-substitute CMO and CNTs-added CMO at various temperatures	87
50 Linear thermal expansion coefficient of C-substitute CMO and CNTs-added CMO at various temperatures	88
51 Internal energy of C-substitute CMO and CNTs-added CMO at various temperatures	89

LIST OF FIGURES (Continued)

Figure	Page
52 Heat capacity of C-substitute CMO and CNTs-added CMO at various temperatures	89
53 Auto-correlation function and thermal conductivity of C-substitute CMO and CNTs-added CMO at various times	90
54 Seebeck coefficient of CMO at various temperatures	91
55 Electrical conductivity of CMO at various temperatures	92
56 Power factor of CMO at various temperature	93
57 Thermal conductivity of CMO at various temperatures	93
58 Seebeck coefficient, electrical conductivity and power factor of CNTs-added CMO at various temperature	94
59 Thermal conductivity of CNTs-added CMO at various temperature	95
60 Seebeck coefficient of C-substitute CMO at various temperature	96
61 Electrical conductivity of C-substitute CMO at various temperature	96
62 Power factor of C-substitute CMO at various temperature	97
63 Thermal conductivity of C-substitute CMO at various temperature	98
64 Dimensionless figure of merit (ZT) of CMO, CNTs-added CMO and C-substitute CMO at various temperature	99
