LIST OF TABLES

Table	Page
1 The Heusler alloys crystal structure data	6
2 Chemical potential of Ti, Ni, and Sn with the completing phases referred to in Figure 11	29
3 The maximum power factor (PF_{max}) for TiNiSn, Ni-vac, Ti_{Ni} , Sn_{Ti} , Sn_{Ni} , Ti-int, and Ni-int	35
4 The lattice constant (a_0) and bulk modulus (B_0) of $Ti_{1-x}TM_xNiSn$ (TM = Sc, Zr, Hf, V, Nb, Mn) together with the experimental and theoretical data	40
5 The Debye temperature (Θ) of $Ti_{1-x}TM_xNiSn$ (TM = Sc, Zr, Hf, V, Nb, Mn) together with the experimental and theoretical data at 300 K	42
6 The lattice thermal conductivity (κ_{lat} in W/m.K) of $Ti_{1-x}TM_xNiSn$ (TM = Sc, Zr, Hf, V, Nb, Mn) together with the literature values which are present at 300 K	43
7 Equilibrium structural parameters: lattice constant (a_0), total energy (E_0), bulk modulus (B_0), and enthalpy of formation energy (E_f) for TiNiSn and $Ti_{0.5}TMI_{0.25}TMII_{0.25}NiSn$ (TMI and TMII are Sc, Zr, Hf, V, Nb, or Mn)	54
8 The scattering time, κ_{lat} , and ZT for TiNiSn and $Ti_{0.5}TMI_{0.25}TMII_{0.25}NiSn$ (TMI and TMII are Sc, Zr, Hf, V, Nb, or Mn) at room temperature	62

LIST OF FIGURES

Figure	Page
1 Periodic table for Heusler compounds. Blue, red, and green color are representing an element for X , Y , and Z , respectively	5
2 The family of Heusler structure composed hH , fH , iH , and qH	5
3 The magnetic moment per formula unit of Co_2 -based fH alloys agree with the Slater–Pauling rule	7
4 Schematic primary thermocouple (Rowe, 2006, p. 1–1)	8
5 The relation of ZT and η versus hot side temperature for skutterudite, hH , and low ZT material (Snyder & Toberer, 2008, pp. 105–114)	9
6 Thermoelectric properties versus carrier concentration	10
7 The ZT versus temperature for (a) p-type and (b) n-type thermoelectric materials	10
8 A statistic of citation per year to the DFT works (Giustino, 2014)	11
9 The Chachiyo’s formula compared with the Monte Carlo results and VWN functional, and high-density limit Chachiyo (2016, p. 021101)	15
10 Schematic flow-chart for finding the self-consistent solutions of the Khon–Sham equations	17
11 The chemical potential region of stability for Ti–Ni–Sn in 2D space which spanned by μ_{Ni} and μ_{Ti} . The eleven points are discussed in the results and discussion section	29

LIST OF FIGURES (Continued)

Figure	Page
12 The calculated defect formation energy of self-defect TiNiSn including self-vacancies (a), self-substitutions (b), and self-interstitials (c) at Fermi energy = 0. The inset shows the chemical potential and completing phases which are described in Table 2	31
13 Total density of state versus energy (a) and the total density of state at Fermi energy (b) for TiNiSn, Ni-vac, Ti_{Ni} , Sn_{Ti} , Sn_{Ni} , Ti-int, and Ni-int	32
14 Total density of states at the Fermi energy versus temperature for TiNiSn, Ni-vac, Ti_{Ni} , Sn_{Ti} , Sn_{Ni} , Ti-int, and Ni-int	33
15 The Seebeck coefficient (a), electrical conductivity (b), power factor, (c), and electron concentration (d) versus temperature for TiNiSn, Ni-vac, Ti_{Ni} , Sn_{Ti} , Sn_{Ni} , Ti-int, and Ni-int	34
16 The electron thermal conductivity (a) and specific heat (b) versus temperature for TiNiSn, Ni-vac, Ti_{Ni} , Sn_{Ti} , Sn_{Ni} , Ti-int, and Ni-int	36
17 The total energies versus lattice constant for $Ti_{0.75}TM_{0.25}NiSn$ (TM = Sc, Zr, Hf, V, Nb, Mn)	38
18 The minimum total energies (a), lattice constant (b), bulk modulus (c), and Debye temperature (d) for $Ti_{1-x}TM_xNiSn$ (TM = Sc, Zr, Hf, V, Nb, Mn) at the ground state	39
19 The lattice constant versus temperature for $Ti_{1-x}TM_xNiSn$ (TM = Sc, Zr, Hf, V, Nb, Mn; X = 0 – 1)	41
20 The bulk modulus versus temperature for $Ti_{1-x}TM_xNiSn$ (TM = Sc, Zr, Hf, V, Nb, Mn; X = 0 – 1)	41

LIST OF FIGURES (Continued)

Figure	Page
21 The Debye temperature versus temperature for $Ti_{1-x}TM_xNiSn$ (TM = Sc, Zr, Hf, V, Nb, Mn; X = 0 – 1)	45
22 The Grüneisen parameter (a) and lattice thermal conductivity (b) for $Ti_{1-x}TM_xNiSn$ (TM = Sc, Zr, Hf, V, Nb, Mn; X = 0 – 1). The Grüneisen parameter (c) and lattice thermal conductivity (d) versus temperature for $Ti_{0.75}Zr_{0.25}NiSn$, $Ti_{0.75}Hf_{0.25}NiSn$, and $Ti_{0.50}Mn_{0.50}NiSn$	45
23 The $Ti_{0.5}TMI_{0.25}TMII_{0.25}NiSn$ crystal structure (TMI and TMII are Sc, Zr, Hf, V, Nb, or Mn)	50
24 The calculated energy versus lattice constant for $Ti_{0.5}Sc_{0.25}Zr_{0.25}NiSn$ (Sc&Zr), $Ti_{0.5}Sc_{0.25}Hf_{0.25}NiSn$ (Sc&Hf), $Ti_{0.5}Sc_{0.25}V_{0.25}NiSn$ (Sc&V), $Ti_{0.5}Sc_{0.25}Nb_{0.25}NiSn$ (Sc&Nb), $Ti_{0.5}Sc_{0.25}Mn_{0.25}NiSn$ (Sc&Mn), $Ti_{0.5}Zr_{0.25}Hf_{0.25}NiSn$ (Zr&Hf), $Ti_{0.5}Zr_{0.25}V_{0.25}NiSn$ (Zr&V), $Ti_{0.5}Zr_{0.25}Nb_{0.25}NiSn$ (Zr&Nb), and $Ti_{0.5}Zr_{0.25}Mn_{0.25}NiSn$ (Zr&Mn)	52
25 The calculated energy versus lattice constant for $Ti_{0.5}Hf_{0.25}V_{0.25}NiSn$ (Hf&V), $Ti_{0.5}Hf_{0.25}Nb_{0.25}NiSn$ (Hf&Nb), $Ti_{0.5}Hf_{0.25}Mn_{0.25}NiSn$ (Hf&Mn), $Ti_{0.5}V_{0.25}Nb_{0.25}NiSn$ (V&Nb), $Ti_{0.5}V_{0.25}Mn_{0.25}NiSn$ (V&Mn), $Ti_{0.5}Nb_{0.25}Mn_{0.25}NiSn$ (Nb&Mn), and $TiNiSn$	53
26 Total density of state (TDOS) of $TiNiSn$ and $Ti_{0.5}TMI_{0.25}TMII_{0.25}NiSn$ (TMI and TMII are Sc, Zr, Hf, V, Nb, or Mn)	56

LIST OF FIGURES (Continued)

Figure	Page
27 The Seebeck coefficients of TiNiSn and $Ti_{0.5}TMI_{0.25}TMII_{0.25}NiSn$ (TMI and TMII are Sc, Zr, Hf, V, Nb, or Mn) versus chemical potential at 300 K	56
28 The band structure of TiNiSn (black line). The colored lines (green, red, and blue) represent the valence and conduction bands for $Ti_{0.5}TMI_{0.25}TMII_{0.25}NiSn$ composed ScV (a), ScNb (a), ScMn (a), ZrHf (b), ZrV (b), ZrNb (b), ZrMn (b), HfV (c), HfNb (c), HfMn (c), and VNb (c)	57
29 The partial density of state (PDOS) of TiNiSn (a) and $Ti_{0.5}TMI_{0.25}TMII_{0.25}NiSn$ composed of ScV (b), ScNb (c), ScMn (d), ZrHf (e), ZrV (f), ZrNb (g), ZrMn (h), HfV (i), HfNb (j), HfMn (k), and VNb (l)	59
30 The calculated Löwdin charges of TiNiSn and $Ti_{0.5}TMI_{0.25}TMII_{0.25}NiSn$	59
31 The power factor (a), total thermal conductivity (b), and ZT (c) versus chemical potential for TiNiSn and $Ti_{0.5}TMI_{0.25}TMII_{0.25}NiSn$, at room temperature	60
32 The lattice thermal conductivity versus time–correlation for TiNiSn and $Ti_{0.5}TMI_{0.25}TMII_{0.25}NiSn$, at room temperature	62
33 The enthalpy formation energy and defect formation energy for $TiNiSn_{1-x}A_x$	67
34 The partial density of state for TiNiSn	68
35 The partial density of state for $TiNiSn_{1-x}A_x$ (A = As, Sb, and Bi; $x = 0 - 0.125$)	68

LIST OF FIGURES (Continued)

Figure	Page
36 The band structure for $\text{TiNiSn}_{1-x}\text{A}_x$ (A = As, Sb, and Bi; $x = 0 - 0.125$)	69
37 The Seebeck coefficient versus temperature for $\text{TiNiSn}_{1-x}\text{A}_x$ (A = As, Sb, and Bi; $x = 0 - 0.125$)	71
38 The electrical conductivity versus temperature for $\text{TiNiSn}_{1-x}\text{A}_x$ (A = As, Sb, and Bi; $x = 0 - 0.125$)	71
39 The power factor versus temperature for $\text{TiNiSn}_{1-x}\text{A}_x$ (A = As, Sb, and Bi; $x = 0 - 0.125$)	72
40 The electron thermal conductivity versus temperature for $\text{TiNiSn}_{1-x}\text{A}_x$ (A = As, Sb, and Bi; $x = 0 - 0.125$)	73
41 The lattice thermal conductivity versus temperature for $\text{TiNiSn}_{1-x}\text{A}_x$ (A = As, Sb, and Bi; $x = 0 - 0.125$)	73
42 The phonon dispersion for TiNiSn	74
43 The phonon dispersion for TiNiAs	74
44 The phonon dispersion for TiNiSb	75
44 The phonon dispersion for TiNiSb	75
46 The phonon density of state for TiNiSn , TiNiAs , TiNiSb , and TiNiBi	76
47 The total thermal conductivity versus temperature for $\text{TiNiSn}_{1-x}\text{A}_x$ (A = As, Sb, and Bi; $x = 0 - 0.125$)	77
48 The dimensionless figure of merit versus temperature for $\text{TiNiSn}_{1-x}\text{A}_x$ (A = As, Sb, and Bi; $x = 0 - 0.125$)	77

LIST OF FIGURES (Continued)

Figure	Page
49 The Hall carrier concentration versus temperature for $\text{TiNiSn}_{1-x}\text{A}_x$ (A = As, Sb, and Bi; $x = 0 - 0.125$)	78
